Perimeter Detection Alarm Verification

Radar

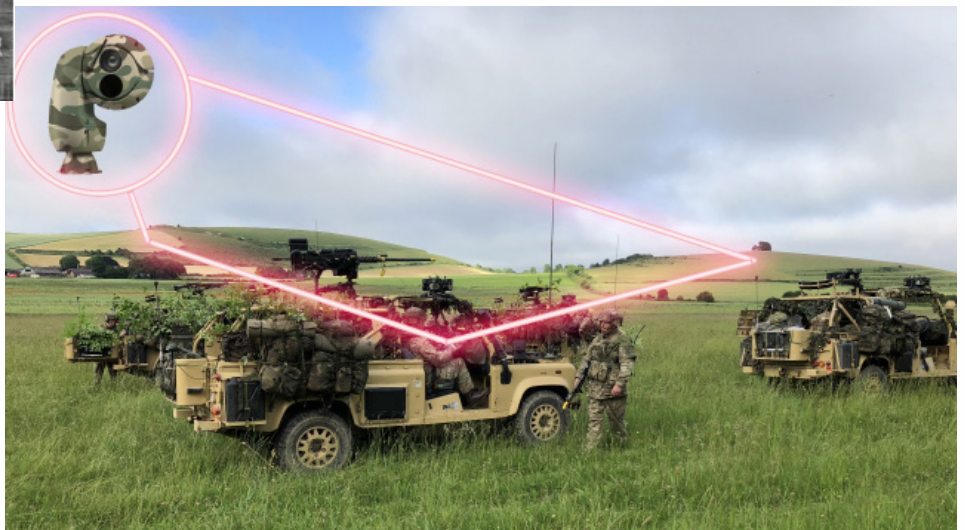

- Compact remote surveillance solution for harsh environments
- 24 hour, all-weather capability from passive visual and LWIR thermal imagers
- Low size and weight - easy and quick to deploy as an unmanned OP
- Ideal for covert operations. Minimal thermal signature and silent operation
- Excellent concealment gives low risk of compromise and excellent survivability
- Low power consumption enables long-term remote operation
- Highly rugged and fully weatherproof (IP68), with lens wiper
- Secure wireless communication permits long range deployments

Man deployable remote surveillance for harsh environments

PodView is a man deployable remote surveillance solution that enables a step change in the reconnaissance of large areas while providing standoff protection to the observer. PodView brings cost effective and proven commercial (COTS) technology in the form of state-of-the-art sensors, artificial intelligence (AI) and wireless communications to defence reconnaissance and protection applications.
